

C_BOWI_4302

1. Which three methods can you use to combine queries using the Web Intelligence Rich Client?

There are 3 ✓ answers to this question.

UNION ✓

MINUS ✓

UNION ALL

INTERSECT ✓

2. What happens when you drop a dimension into a blank part of a report that contains two blocks, without the ALT key selected? Please choose the ✓ answer.

A new block is created.

A new section is created. ✓

An error message is displayed.

The currently selected cell is displayed.

3. Identify from the following options which ensure that the data displays on the page in a way that is easy to view and interpret? Please choose the ✓ answer.

The Padding options at single level of your document

The Format options at various levels of your document ✓

The Page break options at various levels of your document

The Format options at single level of your document

4. Which method can you use to build a custom sort? Please choose the ✓ answer.

Right-click the table, select "Custom Sort"

Right-click the table, select "Sort" and select "Custom Sort"

Select a column; on the toolbar, click the "Custom Sort" button

Select a column; on the toolbar, click the "Apply Sort" button and select "Custom Sort" ✓

5. Where in a Web Intelligence report do you view merged objects in BusinessObjects Web Intelligence XI 4.x? Please choose the ✓ answer.

Report Properties tab

Data tab ✓

Navigation tab

Object Properties tab

6. You need to create a report that compares data to a reference data set. You create the report and activate the track data option. The report ✓ly indicates the changes in the data; however when you make another change to the report, the display no longer indicates any data tracking.

What actions could have caused this behavior? There are 2 ✓ answers to this question.

You drilled outside the scope of analysis. ✓

You activated query drill mode. ✓

You added a report break.

You added a chart to the report

7. Which keyword is defined as flexible for input contexts? Please choose the ✓ answer.

In

All

ForAll

ForEach ✓

8. Which statement is true of the Where operator when used within a variable? Please choose the ✓ answer.

It instructs the variable to calculate only where certain values are true. ✓

It modifies the HAVING clause of the SQL generated to calculate the measure expression.

It modifies the WHERE clause of the SQL generated to calculate the measure expression.

It is not necessary to place parentheses around the values listed after the Where operator.

9. What happens if an operational prompt is blank when you execute a query?

The query filter is ignored. ✓

The query returns an empty record set.

The query is filtered by the default value of the prompt.

The query is filtered by the last value selected.

10. Which two are benefits of using breaks? There are 2 ✓ answers to this question.

Creates a navigation map ✓

Makes the table block easier to read ✓

Splits the block into smaller table blocks

Enables the use of subtotals in one block ✓

11. Which statement describes the performance impact that data tracking has on report refresh times, assuming that the data changes but the number of rows retrieved and the data volume stays the same? Please choose the ✓ answer.

It will refresh up to three times faster.

It will refresh up to three times slower. ✓

It will refresh faster each time the report is refreshed.

It will refresh slower each time the report is refreshed.

12. Which operator should you use to control the output context of a calculation that is relevant to the different environment levels within your document? Please choose the ✓ answer.

In ✓

Out

ForAll

ForEach

13. What is the default behavior when creating a report from two queries from the same universe?

Please choose the ✓ answer.

Result produces two table blocks.

Dimension objects are automatically merged. ✓

Results are shown on two different report tabs.

Dimension objects are not automatically merged.

14. Where is a Web Intelligence variable stored? Please choose the ✓ answer.

In the cell

In the document ✓

In the Metadata Cube

In the Central Management Server (CMS)

15. Discuss all the advantages link to organizing a report in the section There are 2 ✓ answers to this question

You can have multiple blocks projected from the same microcube within a single report, all sub-grouped to the sectioned level ✓

You can have single block projected from the same microcube within a single report, all grouped to the sectioned level

You can insert subtotal cells, repeated in each section, which are created by the simple process of drag and drop ✓

You can insert tables, different in each section, which are created by the simple process of drag and drop

16. Which three statements are true about alerters? There are 3 ✓ answers to this question.

You can apply alerters to charts. ✓

You can apply multiple alerters to one block. ✓

You can apply the same alerter to multiple blocks. ✓

You can control the order in which alerters are applied. ✓

17. Why do you use the "Turn into" functionality?

To change the data source of a document

To change the table into a chart ✓

To change the object of a section

To change the data type of an object

18. Which function would you use to extract the word "casual" from the product name "casual pants" of the Product Name field? Please choose the ✓ answer.

Left(5; [Product Name])

Left([Product Name]; 5) ✓

Right((Product Name), 5)

Right(5, [Product Name])

19. In which of the following can you use If () function in Web Intelligence?

Prompts

Variables ✓

Input control

Drill filters

20. To what can you apply a conditional formatting rule? Note: There are 2 ✓ answers to this question.

Data in a query filter ✓

Data in a chart

Data in a section cell ✓

Data in a table ✓

21. Which tool do you use to edit merged objects in BusinessObjects Web Intelligence 4.0? Please choose the ✓ answer.

The Data tab of the Document Properties

The Edit Dimensions button on the Reporting toolbar

The Merge Dimensions button on the Reporting toolbar ✓

The Object Properties in the Data tab of the Report Manager

22. Which two statements are true of contexts? There are 2 ✓ answers to this question.

You can combine objects in different contexts. ✓

You cannot combine objects in different contexts.

You can combine any object within the same context to create a query. ✓

You can combine only measures within the same context to create a query.

23. You want to force the calculation context of a variable in a table so that its values do not change when a dimension is added to the table.

Which of the following statements is ✓? Please choose the ✓ answer.

You include the dimension using the input context.

You exclude the dimension using the input context.

You include the dimension using the output context.

You exclude the dimension using the output context. ✓

24. Which two personal folders are available by default to Web Intelligence users? There are 2 ✓ answers to this question.

Inbox ✓

My Favorites ✓

My Documents

Personal Documents

25. Which Web Intelligence component should you use to list the existing variables in a report?

Please choose the ✓ answer.

Report Manager ✓

Formula Editor

Variable Editor

Slice and Dice Panel

26. Which two statements are true of an ambiguous query? There are 2 ✓ answers to this question.

It can be resolved with a loop. ✓

It can be resolved with a context. ✓

It contains all possible combinations of rows from the tables inferred by the objects.

It contains one or more objects that can potentially return two different types of information. ✓

27. Which three data sources can you synchronize in a Web Intelligence 4.0 document (WID)? There are 3 ✓ answers to this question.

Personal data files ✓

Stored procedure data source

Queries from the same universe ✓

Queries from different universes ✓

28. Where is a variable saved?

In the document ✓

In a category

In a query

In the universe

29. Which method should you use to force each section of a report to start on a new page? Please choose the ✓ answer.

Select the section, Press CTRL-Enter.

Right-click the section, select "Start Section on New Page".

Select the section; in the Properties tab, check "Start on New Page". ✓

Select the section; click Report > Section and select "Start on New Page".

30. Which statement is a benefit of using a Web Intelligence formula? Please choose the ✓ answer.

The formula can be reused in a document from the Data tab.

The formula can be reused to create a variable. ✓

The formula can be saved into a new function.
The formula can be saved and reused in a measure object.

31. Which of the following sequence is ✓ -To Insert a Block in Each Section? Please choose the ✓ answer.

- Click Report Element Map Insert Column Chart
- Click Report Element Report Insert Column Chart
- Click Report Element Chart Insert Column Chart ✓
- Click Report Element Section Insert Column Chart

32. Which three options are default page number cells? There are 3 ✓ answers to this question.

- Page Number ✓
- Total Number of Pages ✓
- Page Number / Total Pages ✓
- Total Number of Pages in Section

33. Which three are prerequisites for combining data from multiple data providers? There are 3 ✓ answers to this question.

- There are two or more queries in your document. ✓
- Both data providers must have the same dimension values. ✓
- Data values from each linked dimension must have a common format. ✓
- Object name from different universes in both data providers must be the same.

34. Which method should you use to activate "Interactive Viewing"? Please choose the ✓ answer.

- Preferences in Web Intelligence
- Preferences in InfoView ✓
- In the Document Properties
- In the Report Properties

35. Which two options can you change when using Quick Display Mode? There are 2 ✓ answers to this question.

- Limit Query Results ✓
- Sample Query Results
- Vertical Records Per Page ✓
- Horizontal Records Per Page ✓

36. Which character should you use to reset the result of the RunningSum() function for either a break or a section? Please choose the ✓ answer.

- Semicolon (;) ✓
- Percent (%)
- Underscore (_)
- Comma (,)

37. Conditional formatting rules enable you to highlight results that meet or fail specific business targets.

Name the elements associated with the Formatting rules? There are 3 ✓ answers to this question

- An object or cell contents ✓
- A modified data formatting
- A cell section
- An operator ✓
- The conditional formatting ✓

38. Which three statements about the If() function are ✓? There are 3 ✓ answers to this question.

Values within the function must be in quotes.✓

The function can be used to create a variable.✓

The function can contain an aggregate function.✓

Then and Else keywords can be used within the function instead of the semicolon.✓

39. Which two are benefits of creating queries from existing queries? There are 2 ✓ answers to this question.

Improved query security✓

Accurate duplication of query parameters✓

Improved performance of query execution

Reduced creation time for complex reports✓

40. You are reviewing a report with the following statement in a variable:

```
=If([Sales revenue] > 750000) Then "Top Performer" Else If([Sales revenue] Between  
(200000;650000)) Then "Average Performer" Else If ([Sales revenue] < 200000) Then "Low  
Performer"
```

Which statement is true of the results produced by the statement for sales representatives with sales between 650,000 and 750,000? Please choose the ✓ answer.

They will be Top Performers.

They will be Average Performers.

They will not be included in the report.

They will not have a performance value assigned.✓

41. What happens when you create a section in a report? (2 answers)

Blocks in the report are repeated for each section value.✓

Page breaks are created to divide each section value

Header and footer cells are created for each section value.

Free-standing cells are created to label each section value.✓

42. You have applied report filters to your document.

How do you ensure that end users are aware of this when viewing a document in Reading mode?

Display prompt values in free-standing cells.

Display the Report filters in free-standing cells.✓

Display predefined filters in free-standing cells.

Display the Query Summary in a free-standing cell.

43. Which method should you use to activate data tracking? Please choose the ✓ answer.

Select the "Track" button on the toolbar.✓

In the Query panel, enable "Keep History".

In the InfoView Preferences, enable "Track Data Changes".

Right-click the column in the report and select "Activate Data Tracking".

44. For which tasks do you use an If() function? There are 2 ✓ answers to this question.

To conditionally show rows in a block✓

To conditionally execute a scheduled report

To display dynamically grouped values✓

To display a dynamic list of values

45. Discuss the components of a Web Intelligence Document? There are 3 ✓ answers to this question

- One or more reports ✓
- One or more blocks ✓
- One or more filters
- One or more Pattern

46. Which two settings can you configure for the Sample option in the Properties tab of the Web Intelligence Query panel? There are 2 ✓ answers to this question.

- You can enable the "Fixed" option. ✓
- You can set the "Max retrieval time".
- You can set the "Max rows retrieved".
- You can specify a "Sample Result" set. ✓

47. You have a regional sales report with State, City and Sales Revenue dimensions. You want to create a variable that excludes State from the output context.

Which output statement should you use? Please choose the ✓ answer.

- In([State])
- Out([State])
- ForAll([State]) ✓
- ForEach([State])

48. Which two break properties can you use when setting Break Priority? There are 2 ✓ answers to this question.

- Order Breaks ✓
- Vertical Breaks ✓
- Crosstab Breaks
- Horizontal Breaks ✓

49. Which panel should you use to view a Document Summary of a BusinessObjects Web Intelligence 4.0 document (WID)? Please choose the ✓ answer.

- Advanced
- Query
- Active X
- Interactive ✓

50. Which two functions can you use to concatenate the strings "England" and "New" to create the string "New England"? There are 2 ✓ answers to this question.

- Left() ✓
- LeftPad() ✓
- LeftTrim()
- Concatenate() ✓

51. Why is the subtotal missing from the bottom of each break in the attached diagram?

- The report is NOT sectioned by year.
- The default aggregation on the measure is delegated.
- The calculation was applied to the table before the break. ✓
- The break footers display option is NOT selected.

52. Which three layout options can you use when creating sections in a report? There are 3 ✓ answers to this question.

Relative Position ✓

Start on New Page ✓

Keep Blocks Together

Avoid Page Break in Section ✓

53. Which two operators can you use with output context in the Web Intelligence Rich Client? There are 2 ✓ answers to this question.

In ✓

Out

ForAll ✓

Output

54. Which three elements are parts of a query filter? There are 3 ✓ answers to this question.

Class ✓

Object ✓

Operator ✓

Operand ✓

55. Which of the following options are use to create a default vertical table? There are 2 ✓ answers to this question

Create a validate query ✓

Create a new query ✓

Run a new query ✓

Run query panel

56. Which two are limitations of a detail object? There are 2 ✓ answers to this question.

It cannot be drilled on. ✓

It cannot be used in the report filter.

It cannot be merged in a document. ✓

It cannot be used in the WHERE statement of the query.

57. Select the ✓ sequence To Format a Bar Chart? Please choose the ✓ answer.

Report Element>Chart>Insert Column Chart ✓

Chart> Report Element >Insert Column Chart

Chart> Insert Column Chart >Report Element

Insert Column Chart>Chart>Report Element

58. Where should you configure the regional settings of a Web Intelligence document (WID) within InfoView? Please choose the ✓ answer.

Local Settings

Browser Preferences

User Machine Settings

InfoView Preferences ✓

59. Where do you view merged dimensions? Please choose the ✓ answer.

In the Report Map pane

In the Available Objects pane ✓

In the Document Structure and Filters pane

In the Query panel

60. What is the maximum number of sub-alerts that an alerter can contain? Please choose the ✓ answer.

1

8 ✓

16

32

61. Which three can you use to start the Web Intelligence Rich Client from? There are 3 ✓ answers to this question.

InfoView ✓

Command Line ✓

Start > All Programs ✓

Central Management Console

62. Which two statements are ✓ about hierarchies in Web Intelligence? There are 2 ✓ answers to this question.

They can be created using the Query panel. ✓

They can be created in the Scope of Analysis panel.

They can be chosen using a custom Scope of Analysis. ✓

They are used to define the drill path in the Scope of Analysis. ✓

63. Name the types of query filters that you can use in Web Intelligence? There are 3 ✓ answers to this question

Validate query filter ✓

Designer query filters

Predefined query filters ✓

Single and multi-value filters ✓

Prompted filters ✓

64. Which three statements are true of calculation contexts? There are 3 ✓ answers to this question.

If no context is defined the default context is assumed. ✓

You can use NoFilter() as an extended syntax keyword when using contexts.

The ForEach context operator automatically takes the dimensions in the block into account. ✓

You must place parentheses around the values listed after the Where keyword when using the Where operator. ✓

65. Which two statements are ✓ about saving documents? There are 2 ✓ answers to this question.

They are stored in folders. ✓

They are stored in categories.

They can be assigned to a folder.

They can be assigned to a category. ✓

66. How does WHERE operator affect a formula?

It adds the dimension to the default context.

It removes the dimension from the default context.

It determines the order of the results.

It restricts the dimension used to calculate a measure. ✓

67. Which of the following are extended syntax keywords? (2 answers)

Table ✓

Report ✓

Section ✓
Document

68. Which of the following option is not a component of Web Intelligence Application Structure?
Please choose the ✓ answer.

Toolboxes

The Left Panel

The Expand panel ✓

The Status Bar
